Regulatory Testing

ISTA 3A	This test simulates typical shipping activity by subjecting the shipping systems to the worst-case scenarios associated with shipping and distribution.
ISTA 3B	This test assesses packaged products intended for distribution through a retailer fulfillment system. It simulates the combined hazards of transportation and handling, including vibration, drop, compression, and environmental factors, to ensure packages can withstand real-world shipping conditions.
ISTA 7E	This test evaluates the thermal performance of insulated shipping containers, with or without refrigerants, under controlled laboratory conditions. It uses pre-defined seasonal temperature profiles to replicate real-world distribution scenarios, ensuring the package maintains required temperature ranges. It is applicable to products up to 150 pounds.
ASTM D4169	This packaging test assesses the performance of a packaging system when exposed to the typical hazards encountered in a distribution environment. It incorporates sequences of hazards such as handling, stacking, vibration, and low-pressure conditions, ensuring packaging systems can endure typical transportation stresses.
IATA CAT B	The testing evaluates the adequacy of the packaging to protect the payload (a Category B infectious substance) during a simulated distribution test, which includes drop, leakproofness, pressure differential, thermal shock, and vibration assessments, in accordance with the IATA Packing Instruction 650, Category B Infectious Substance Testing procedure.
IP53 Rated	This certification demonstrates protection against dust ingress and spraying water. An IP53 rating indicates the product is safeguarded from limited dust exposure and water sprayed at up to a 60° angle, ensuring reliable performance in challenging environments.
